

# **R**eport of the university librarian to the senate

THE UNIVERSITY OF BRITISH COLUMBIA LIBRARY  
1986-87

The Report  
of the University Librarian  
to the Senate  
of the  
University of British Columbia

Seventy-second Year

1986/87

Vancouver

March 1988

## ANNUAL REPORT - 1986-87

From time to time the University Librarian's report to Senate should look both back and forward, commenting on what has been accomplished and outlining what needs to be done. This report will review progress in the light of general objectives for the Library as they were described in 1978. All were intended to help achieve the primary objective of meeting the information needs of UBC faculty and students. In the second part of the report, short and medium term goals for the coming years will be identified.

### I. General Objectives Defined in 1978

#### **1. Collections**

"To select and acquire, within the limits of the financial resources available, the books, journals, and other library materials needed by the University."

Continued heavy use of the collections suggests that in most areas the materials acquired by the Library are meeting genuine needs of the University. There has been extensive consultation with faculty members in areas where requirements may be changing, such as in the Asian and Pacific Rim collections. Where it has been necessary to cut back on journal subscriptions, procedures for consulting academic departments about priorities have been carefully followed. Those responsible for selecting books and journals for the collection are obliged to make difficult decisions about titles that have become too expensive to purchase routinely. Without a carefully balanced approach to selection, it is possible in these circumstances that expensive publications of considerable value to library users may be passed over in favour of less costly but less useful publications.

In common with other Canadian research libraries, our ability to acquire the books, journals, and other library materials needed has been seriously affected by inflation and the devaluation the Canadian dollar. The problem of declining acquisitions has been experienced by almost all academic research libraries in recent years, and most have had to respond by cancelling journal subscriptions and reducing book purchases. However, it is fair to say that the UBC Library is considerably less able to meet its collections objectives than it was six years ago.

The extent to which prices for journals and books have increased over the past six years is intimidating. A few examples may illustrate the problem faced by the Canadian academic library which spends almost 95% of its collections funds for materials published outside of Canada:

In the five year period from 1980-81 to 1985-86, the average price of academic books published in the United States increased by 55.9% in Canadian dollars.

Periodicals published in the United States cost about 145% more in Canadian dollars last year than in 1980.

In the past two years, the average price of British books in Canadian dollars has increased by 51.3%.

British periodicals on the average cost the Canadian library 94.4% more last year than they did in 1980.

The average price of books published in Germany increased by almost 105% in Canadian dollars between 1980 and 1987.

From 1980-81 to 1986-87, the UBC Library increased its collections expenditures by 46.6% (including expenditures of additional funds provided for collections when the health science library network was established). The Library administration, the President's office, and the Senate Library Committee have been actively exploring ways of addressing the problem of rising collections costs. Between new money and reallocations within the Library budget, increases of 14% in 1986-87 and 10% in 1987-88 were provided to the collections. Under normal circumstances, that would have been sufficient to help to catch up from some very dry years, but because of the rate at which prices have risen, even increases of that magnitude have not kept pace.

The effect of increased prices for collections was most evident in expenditures for serials, and two serials cancellation projects were required (\$150,000 in cancellations in 1981-82 and \$163,000 in 1986-87). It seems likely that further cancellations will be required in 1988-89. While less immediately apparent to the library user, book acquisitions have been seriously affected as well by the reduction in purchasing power.

Though it is difficult in a large library system to establish a direct correspondence between collections expenditures and interlibrary borrowing, it should be noted that the UBC Library borrowed almost 72% more items from other libraries in 1986-87 than it did in 1981-82. The number of items borrowed (10,519 last year) is not unreasonably high, but the upward trend has been constant over the past six years.

Implicit in the objective to acquire library materials needed by the University should be a recognition of the value of information sources that cannot be "acquired" in the usual sense, but to which access can be provided nonetheless. For example, the Library makes extensive use of electronic databases held elsewhere. These are usually bibliographic databases, but may also be quantitative or textual. At the present time, local acquisition of such databases is seldom feasible, but this may change as the Library begins to acquire databases like MEDLINE by subscribing to machine-readable versions on CD-ROM and purchasing hardware for end-user searching. Of course, large quantities of data in machine-readable form are already acquired and made available through the UBC Data Library.

The provision of access to information in electronic form as a substitute for the acquisition of printed materials is a subject of current interest to the Library. At the present time, the pricing of many electronic products seems capricious and, under most circumstances, argues against the elimination of corresponding printed publications. In each instance other factors as well as direct costs must be considered if present levels of public access are to be maintained. There is no doubt, however, about the growing importance to the Library of ensuring access to information in electronic form from both external and locally acquired sources.

## 2. Processing Library Collections

"To catalogue and classify those materials and to prepare them for use."

Much more occurs to accomplish this general objective than is suggested above. Books, journals, and other collections materials must be ordered, received, paid for, claimed if not delivered when expected, recorded as being in process, catalogued when suitable information is available, and physically prepared for the shelves. In addition, extensive revision of shared cataloguing information is often required to place materials appropriately within special classification schemes adopted at UBC years ago.

Before funding for the B.C. Union Catalogue Project ended in 1982, a substantial part of the Library's older catalogue records was converted to machine-readable form, and these records, along with new ones for materials purchased since 1978, form the database for the developing online public access catalogue. The spring of 1988 will see online access to the catalogue and other library databases made available to faculty at UBC, to the Simon Fraser and University of Victoria libraries, and to other library users (through a limited number of public terminals in key locations within the Library). A \$250,000 grant from the Provincial Government for system-wide development made this possible. The proposal for funding was submitted jointly by UBC and Simon Fraser University, with the support of the University of Victoria.

Much more remains to be done. A plan for technological development over the next several years has been prepared, reviewed widely within the Library and more recently by the Senate Library Committee. It proposes the expenditure of about \$3.8 million over the next six years and would bring, among other things, a fully developed online catalogue, a new circulation system, the automation of the vernacular records for Asian collections, and automated systems for interlibrary loan. The completion of retrospective conversion of records (RECON) for pre-1978 collections would cost an estimated additional \$2 million. Sources of funding for these developments have not yet been identified.

The conversion of catalogue records for older materials will become increasingly important as online access to the catalogues becomes the norm. That part of the collection is of critical importance to scholars in the humanities, and it contains materials that are unique to the province and therefore of great interest to other institutions. During the past year, staff in some public service divisions have undertaken preliminary conversion of older records for specific parts of the collection, but these must be revised before they can be integrated into the online catalogue.

Work has continued on other library automated systems. Current serials are now received directly by the teaching hospital libraries and recorded on the serials system, making the latest issues available sooner to those who need them. Other possibilities for decentralizing processing work are being reviewed to determine where costs may be reduced or service improved. To increase the availability of records for cataloguing purposes, the UBC Library has become a member of OCLC (the Online Computer Library Center), which had in June 1987 a membership of 7,900 participating libraries and almost 16 million Marc II records in its online database.

### **3. Access Services**

"To make the collections available to the UBC community and, insofar as it can be done without detriment to the interests of UBC, to make them available to other institutions and individuals."

The Library has continued in its policies to emphasize the broadest possible access to materials, adapting loan periods to meet demand. It is essential to continue to review loan policies as demands on the collections grow and further reductions are made in multiple copies of monographs and duplicate subscriptions to key journals. Without some revision of policies, the failure rate for users seeking specific items from the collection is likely to increase. In this connection, an extensive review of journal titles held in the Woodward Library has been carried out with a view to limiting those in very high demand to use within the Library.

The Library ranks with the very largest academic research libraries in the number of loans it makes to users. In the most recent compilation of supplementary statistics from the Association of Research Libraries (1984-85), the Library's total loans exceeded those reported by any other member library. Only a few libraries at private universities with particularly strong graduate programs make more loans each year per FTE student (91 in 1986-87 at UBC). The ratio of loans to the number of public service staff members in the Library is also very high at UBC in comparison to other public universities. These should be taken as general indicators only, since varying loan policies among the libraries may influence the volume of loans recorded. They do, however, suggest that the UBC community uses the Library intensively and that the number of staff available to provide basic services to the public is not excessive for the work resulting from that demand.

Over the past ten years the community beyond the University has made increasing use of the Library's collections and services. This has occurred less through a deliberate change of policy than through circumstances which have focused attention on the Library as a research resource for the province. Contributing factors include:

- Growth in enrolments at other post-secondary institutions, which has not been matched by corresponding increases in their library resources.
- Emphasis within the business and industrial communities on high technology developments, closer ties with the University's research community, and special interest in subjects such as Pacific Rim trade.
- Increased interest from many high school students in making use of library resources that are not available in secondary school libraries.
- UBC's strong interest in strengthening its ties to the community and to other post-secondary institutions in the province. The Library plays an important role in bringing the community to the University.

The most recent survey carried out by the Library (March 1986) found that more than 22% of the people present in the campus libraries were not affiliated with the University. A recent one-day survey of telephone enquiries at the central information desk determined that 60% of the calls were from persons not formally connected with UBC.

Complimentary borrower cards are available to faculty, professional staff, and graduate students of other B.C. universities, and to faculty members of B.C. colleges and institutes. In addition, any adult resident of B.C. may purchase a UBC library card, and institutional cards may be purchased by organizations. By far the greatest amount of use occurs, however, through direct consultation of materials and reference staff in the Main Library and the branches, for which no fee is charged.

#### **4. Reference Services**

"To interpret the collections to users, assisting them in making effective use of the Library's resources and in gaining access to materials elsewhere."

The ARL supplementary statistics on the number of reference questions received also placed the UBC Library in the top ten reporting libraries for both 1983-84 and 1984-85. More recent comparative figures are not available. Last year, reference staff helped to meet the above objective by responding to 382,803 enquiries and completing 7,330 online searches of external databases. Instruction in the use of the Library continued to be an important aspect of our efforts to promote effective use of the Library's resources, as 636 tours and instructional sessions were given to 9,548 UBC students. Further improvements in directional signs and printed materials have also been made to help to make regular library users more self-sufficient. In recognition of the changing needs of some groups of library users, a series of instructional sessions was successfully organized to assist those who wish to learn to do their own online searches of external databases.

In recent months, reference staff have been helping with the design of user-interfaces for the Library's developing online catalogue. A variety of means will be used to assist users to learn to use the Library's online databases more effectively. The task of making the online catalogue an easy-to-use and efficient tool for the library user will require special effort over an extended period of time.

Assisting library users in obtaining access to materials held by other libraries has been a part of the Library's reference services, provided primarily by the interlibrary loan staff, since the Library's beginning. The importance of this service has grown as library users discover, through online searches of external databases, a wealth of material that might in the past have been overlooked. The use of electronic mail and, in many cases, the ordering of documents as part of the online search process have made the interlibrary loan process more effective. Further improvements in document delivery will be needed as the Library comes to depend more in future on external sources for documents.

We can expect to see somewhat greater use of telefacsimile for the delivery of documents in the near future, though cost and the urgency of the request will determine the extent to which it is used. The next major development for interlibrary loan at UBC will be an automated system for managing and expediting interlibrary loan requests.

## **5. Preservation of the Collection**

"To preserve the collection for the future."

It seems unlikely that the implications of this simple objective were fully understood in 1978. Preservation has become a critically important issue for libraries as more has been learned about the life expectancy of our collections. No single academic research library can hope to accomplish all that is necessary to ensure that its collections will be preserved for future generations; it is essential that the use of resources allocated for preservation be carefully planned to ensure maximum benefit through cooperation with other agencies.

UBC is a subscriber to the work of the Canadian Institute for Historical Microreproductions, through which every available monograph, pamphlet, and broadside published by or about Canada before 1900 has been preserved through microfilming. The CIHM programme is continuing with the microfilming of early Canadian periodicals.

Last spring a Standing Committee on Preservation was established to consider approaches and priorities for the UBC Library. Following the committee's report, an extensive publicity campaign was initiated to make library users aware of the ways in which damage to the collections can be avoided.

- A library committee has also been established to develop a "disaster plan" for the Library. It is an essential precaution that all possible preparations should be made to expedite the proper treatment of library collections in the event of damage through fire, water, or other unexpected emergency.
- Recently, Mrs. Suzanne Dodson, the Head of the Government Publications and Microforms Division, accepted the additional responsibility of serving as Acting Preservation Librarian. Under her direction, priorities and an action plan for the UBC Library will be developed.

## **6. Library Facilities**

"To offer facilities for use of the various forms of library materials on library premises."

After a period of nine or ten years during which the need for additional space has been a constant concern for the Library, it now appears that an acceptable plan has been developed and that support for new library space as a very high University priority has been secured. Without the support of the President's office and of President Strangway in particular, this would not have been possible. I would also like to thank the Senate, the Senate Library Committee, and the Chairman of that Committee, Dr. Jonathan L. Wisenthal, for their efforts to ensure that additional space for library collections will be available.

Dr. Wisenthal also chaired the President's Advisory Sub-committee on Library Space Planning. That Committee had its first meeting in February, 1987 and completed its work during the summer. In those few months, the Advisory Sub-committee met frequently and, with the assistance of consultants, reviewed and confirmed space requirements for the Library and for the David See-Chai Lam Management Research Centre. A review of siting and development options led to a recommendation for construction of new space on the site of the former bookstore. The report was transmitted last fall to the President's office for consideration by the President's Advisory Committee on Space Allocation.

If the proposal goes forward and can be funded, the Library's principal space requirements will be met. The major remaining task will be to renovate space that has been freed in the Main Library so that services can be efficiently organized and current safety codes observed. In that connection, work has almost been completed on the installation of a sprinkler system in the Main Library. While the process has been difficult because of the low ceilings and complex nature of the building, the result should substantially reduce the hazard of fire for patrons and collections.

During the summer, shelving units were installed throughout the Main stacks wherever spaces could be put to this use. Together they provide about one thousand linear feet of shelf space, or room for some nine thousand volumes, equivalent to three months' Main stacks intake of new books. At the same time, fifty thousand volumes were selected from the open shelves for relegation to what was previously temporary, working storage. These two moves complete the full utilization of the Main Library spaces.

It is essential that new library space provide the best possible environmental conditions for collections. Care must also be taken in its design to ensure that the facility can be operated efficiently and that the most modern technology can be accommodated.

Recent improvements in the facilities available to library users include the replacement and upgrading of a number of readers and reader-printers in the Government Publications and Microforms Division. After an extended waiting period, the Library was also able to replace its public photocopying equipment, adding debit card readers for greater user convenience. The replacement of this equipment will be funded from copying revenues. Finally, with funds made available by the University and the Faculty of Medicine, the Library is proceeding to acquire CD-ROM workstations to be located in the Woodward Library and in each of the teaching hospital libraries. With the assistance of the hospital library committees, funds are being raised from private sources for subscriptions to the MEDLINE database on CD-ROM for each location. The new equipment will make it possible for users of the health science libraries to perform many of their own MEDLINE searches.

## **7. External Relationships**

"To cooperate with other bodies in sharing resources and in furthering the goals of the Library."

The Library has continued to participate in local and national cooperative activities and to provide leadership where appropriate. Management of the B.C. Post-Secondary Interlibrary Loan Network (NET) is based at UBC. During its ten years' operation (1977-87), NET has provided 154,211 loans and photocopies to post-secondary libraries in B.C. Sixty-four percent (99,262) of these have come from the UBC Library's collections. The Library also maintains statistical records for the Media Exchange Cooperative (MEC). In 1986/87, 2,759 films and videotapes were circulated through the MEC network, with UBC providing 15% of the total. The UBC Library is the only academic library participating in the Federated Information Network, operated by the Greater Vancouver Library Federation for public libraries in the lower mainland. Since 1974, the Library has provided 21,142 loans and copies to public and provincial government libraries through the FIN network.

In cooperation with other member libraries of the Canadian Association of Research Libraries, the Library is working to prepare a detailed profile of its collections using methodology developed in the United States for the National Collections Inventory Project (NCIP). For each area of the collection, an assessment is made of both existing strength and current collecting level. The results are being collected by the National Library of Canada in a machine-readable database. While it may be some time before the benefits of this work will be realized, we hope that improved information about the scope and depth of UBC's collections will assist in refining collections development policies locally and that a more accurate picture of Canada's academic library resources will lead to improved cooperation in developing and sharing resources.

Individual staff members serve on committees and task forces of the National Library, CISTI, the Canadian Association of Research Libraries, the B.C. Library Association and many specialist groups, such as the Canadian Association for Information Science, the Association of Asian Studies, the Music

Libraries Association, the Canadian Association of Law Libraries, the Association of Canadian Archivists, the Association of Canadian Map Libraries, and the B.C. Health Science Libraries Association. The University Librarian was elected President of the Canadian Association of Research Libraries in June, 1987.

## **8. Efficiency and Economy of Operation**

"To manage the operation of the Library system in an efficient and economical manner."

New services have been introduced and others discontinued during the past six years. Retrenchment in 1983 saw the closure of the Ecology Library as an official branch and, in the same year, the Library withdrew most of its support from departmental reading rooms. Some staff savings were realized from these service reductions, but a major objective was to reduce the number of duplicate subscriptions that the Library would have to maintain in the future. Also in 1983, responsibility for the Film Library, previously part of Extension Services, was transferred to the Library, along with the staff employed to operate it.

As noted earlier, special attention has been given to achieving more efficient operation through continued improvements in the Library's automated systems, particularly those which are essential to the purchasing of materials for the collection, the preparation of materials for use, and the creation of records of Library holdings. Those changes, along with other economies, have allowed the reallocation in the past two years of almost \$430,000 in continuing funds to the collections budget.

Technical processing routines have received closer scrutiny and more frequent review than any other Library operation. Because in some instances processing costs can be reduced or controlled through automation, the Library has given a high priority to the introduction of online systems for the tasks involved in processing. As a result, more than 35 positions have been eliminated from the Processing Divisions since 1973 - it was estimated last year that these positions would have cost \$649,000 annually in 1986 dollars. From 1978, when

the card catalogue was closed and a shift was made to online computing for all technical service systems, until 1987, 23 staff positions were eliminated, a reduction of about 16% in processing staff.

More rapid progress could have been made in the development of the online catalogue system for the benefit of library users if it had been possible to reinvest all of the savings in its development, but unfortunately the University's financial situation has required that annual operating costs be reduced, and automation of processing routines has helped to make this reduction possible. It has also, of course, released funds for reallocation to collections.

The greatest potential for improving efficiency in the public service operations of the Library lies in the development of the online catalogue as an integrated database system. At present, public service staff and users must consult several files to determine what is in the Library's collection. Our long term objective must be to represent the Library's total holdings in the online catalogue and to permit the library user to interact with the catalogue by entering reserve requests and requests for specific items as part of the search process. Changes are being made at the present time to make the process of searching the Library's catalogues easier for staff and users, but the objective will not be met until records for our pre-1978 monograph holdings can be converted and added to the online database.

## **II. Additional Short and Medium Range Objectives**

Appropriate long term goals for the Library will become clearer following the Review of the Library, which should be completed by May, 1988, and the publication of the University's Mission Statement. There are, however, a number of activities underway at the present time which should be advanced or completed in the coming year:

### **1. Space**

Continued efforts will be made to accommodate normal collections growth in existing library spaces, and a plan will be developed for seeking and utilizing new temporary storage space.

## **2. Collections**

The probability of further cancellation of journal subscriptions will require consultation with faculty members, close examination of duplicate subscriptions, and efforts to secure alternative sources for cancelled titles.

Procedures must be put in place to identify journal titles which have increased most substantially in cost. Various options should be considered where cost increases seem excessive or unjustified in terms of the value of the titles to the University. The involvement of faculty members in this process is essential.

Funds will be sought outside the University's operating budget to help to offset the cost of journal subscriptions that are important to the community.

Special efforts must be made to find the means of improving collections in areas of current priority to the University. For the Pacific Rim and Asian collections, where funding has been obtained, the Library will work with faculty members to determine how the collection should be developed.

## **3. Preservation**

Activities directed towards the preservation of the collections will be continued and a formal programme for the preservation of UBC's library collections will be introduced.

## **4. Technology**

The immediate priority will be to continue with the development of the online public access catalogue. As circumstances permit, other priorities identified in the Library's plan for the application of technology will be addressed with the objective of improving services to users and, where possible, helping to control operating costs.

Access to the Library's online catalogues will be extended to college and institute libraries and, if possible, to public libraries in the Greater Vancouver Library Federation.

CD-ROM will be introduced as a means of providing user access to health science databases. Consideration will be given to other areas where CD-ROM or the local acquisition of database tapes may be appropriate.

#### **5. The Library's Profile in the Community**

A newsletter will be prepared for distribution to the re-activated Friends of the Library organization.

Arrangements are being made for a Friends of the Library Council to hold its first meeting within the next few months.

Plans for improved access to the Library's collections through the online catalogue development will be publicized.

### **III. Notable Events in the Last Reporting Year:**

The report of the Faculty/Library Committee to Review Priorities for the UBC Asian Library was received. Several recommendations have either been implemented or are in process: a continuing Faculty/Library Advisory Committee for the Asian Library has been established; catalogue records for Indic materials were reproduced and filed in the Asian Library catalogue; and a listing of Korean books donated to the Library is being prepared. Through the Funds for Excellence Programme, the Library received an additional \$150,000 in continuing funds to improve collections to support Pacific Rim studies and \$45,000 to recruit staff with the additional language skills required.

Last spring saw the completion and publication of A Bookman's Catalogue, The Norman Colbeck Collection of Nineteenth-Century and Edwardian Poetry and Belles Lettres. The contents of this impressive two volume work, published by the University of British Columbia Press, illustrate clearly the remarkable value of the gift that Dr. Colbeck made in donating his personal collection to the University in 1967. Its publication would not have been possible without the thousand-odd pages

of handwritten notes by Dr. Colbeck, the determination and guidance of Dr. William E. Fredeman, and the capable editorial work of Dr. Tirthankar Bose.

- The Patent Search Service (PATSCAN), announced in last year's Report, has now been in operation for more than a year. It is funded at the present time through a grant under the Canada-British Columbia Subsidiary Agreement on Science and Technology Development. During its first full year's operation, almost 500 informational patent searches were carried out, primarily for faculty and graduate students of the three B.C. universities. In addition, prototype work for online retrieval of Canadian patent information has continued and a useful database is now available.

The annual reception of the Wesbrook Society was held in the Main Library on June 4, 1987. The setting, enhanced by artistic and imaginative planning by staff from the Alumni Association, the Development Office, and the Library, made the evening a very pleasant and successful occasion.

- In March, the Library participated actively in UBC's most successful Open House. More than ten thousand Library visitors were given opportunities to win a Library card for a year's use, to take away a photocopy of headlines made on the day they were born, to have their old books assessed by experts, to see online searching demonstrations, a film of UBC's history, a Chinese calligrapher at work... The Library's most conspicuous contribution was OLIF, the On-Line Information File, which made information about Open House events available online at terminals in the libraries and at many campus network terminals.

Efforts to increase public awareness of the Library's value as a major resource for the province of B.C. have continued. The Report of the President on the Library has proved to be an excellent document for this purpose. In addition, the Library contacted many of the outside organizations and individuals that use the Library regularly to determine

how the Library has been able to help them. Responses to this informal survey were most informative and helped to emphasize the critical importance of a strong research library to the community. On the occasion of the University's Open House, the Friends of the Library organization was reinstated after an hiatus of more than fifteen years. Response has been good, though the Library has not yet mounted a general campaign for memberships outside the University.

With the assistance of a generous donation from Mr. Naomichi Nishimura, formerly Director of the Hikone Public Library in Japan, work has begun on the microfilming of Tairiku Nippo (The Continental Daily News). The UBC Library owns the most complete set of this newspaper, published in Vancouver from 1907 to 1941. Since UBC's copy is becoming fragile, this project will ensure that the newspaper is preserved and can be shared with others.

#### **IV. Notable Grants, Gifts and Donations:**

It is always a pleasure to acknowledge the generosity of those who have supported the Library either with financial contributions or gifts in kind. The following items are a few of those received during the reporting year:

##### **1. Grants**

- In the summer of 1987 we learned that the Social Sciences and Humanities Research Council had made a grant to the Library of \$50,000 spread over the following three years, to be used for retrospective material in Japanese history and literature.

The B.C. Council of Archives made a grant of \$12,000 to the Library to help clear a backlog in the processing of archival materials.

The Public Archives of Canada supported an archivist internship programme in the UBC Archives with a \$4,000 grant.

## **2. Donations**

- Among our long-time Friends, Mr. Sam Lipson, Dr. Kaye Lamb, and Mr. Derek Lukin Johnston must be acknowledged for their regular annual gifts. Many alumni remember the Library in their annual givings; this occurs as individual donations or as class projects. This year the Library was pleased to receive a collective donation from the class of 1927.

Several donors contributed to the Crane Library. The Variety Club of B.C. donated two recording consoles; Wm. Mercer (Canada) Ltd., Mr. Wm. R. Read and Mr. James W. Phelps all donated funds to Crane for equipment or other purposes.

First City Financial Corporation, the Boag Foundation, Dean Blythe Eagles, Mrs. Violet Eagles, Mr. Po Ting Ip, Ms. Letitia Hay, and Ms. Betty Hender made donations to support the collections and the UBC Archives.

## **3. Gifts in Kind**

- Gifts to the Special Collections Division include the papers of Hubert Evans, Grace MacInnis, E. Herbert Norman, and Henry Howard. Other gifts to Special Collections include special books and materials from Ms. G.P.V. Akrigg, Mrs. Hilary Brown, Mrs. W.E. Gale, Mr. O. Lauritzen, Ms. Patricia Page.

The UBC Archives received donations of the Walter Young papers from Mrs. Young, the Walter Sage papers from Mrs. Sage, the Michael Bullock papers from Professor Bullock, the Blythe Eagles papers from Dean and Mrs. Eagles, and the N.A.M. MacKenzie medal collection from Mrs. Roote.

- Other donors of gifts in kind to the general collections included Dr. Joel H. Kaplan, Dr. R. Lakowski, Dr. John E. Nafe, Dr. Philip Pinkus, Mrs. Susan Roote, Dr. G.F. Schrack, Dr. M.W. Steinberg, Mrs. Elizabeth Steward, Dr. Peter C. Swann, Mr. Alexander Wainman, and Ms. Glennis Zilm.

## **V. Staff**

As in previous years, the number of Library staff continued to decline, changing from 104.2 professional librarians and 285.29 support staff in 1985/86 to 104 professional librarians and 275.29 support staff in 1986/87, a reduction of 2.6%. Every position which became vacant was rigorously reviewed before a request for authorization to refill was sent to the President's Office. Wherever possible, positions were left vacant, filled through relocation of staff, or filled at a more junior level in order to save money.

Retirements and resignations of both librarians and support staff led to increased turnover during this year. Tung King Ng, Head of the Asian Studies Library for many years, retired at the end of December 1986. After a lengthy search process, she was replaced by Linda Joe.

Joan Selby, Curator of the Colbeck Collection, and also a longtime member of the Library's staff, retired during this year and was replaced by Chuck Forbes, formerly the Head of the Humanities/Social Sciences Division. Phyllis Reeve resigned as Acquisitions Librarian and Karen Olcen resigned as Curriculum/Audiovisual Catalogue Librarian.

Other professional changes resulted from leaves of absence, maternity leaves, and exchanges. Judith Frye, Head, Marjorie Smith Library, was granted one-year leave of absence, and was replaced by Pia Christensen, Humanities/Social Sciences Reference Librarian. Kathy Scardellato, Serials Librarian, went on maternity leave. Jane Price, Co-ordinator of Health Sciences Network Services, was on exchange for six months. Her responsibilities were carried out by John Cole, Reference Librarian, Woodward Library.

Recruiting commenced in July 1987 for four half-time librarians with competency in Asian languages, namely Indic languages, Indonesian, Japanese, and Korean. These positions were established through special funding in support of Pacific Rim studies. None had been filled by the end of the reporting year because of the difficulty in finding qualified and suitable applicants.

Support staff vacancies filled (new appointments, promotions, transfers, recalls, reassignments, temporary promotions, demotions) increased from 44% in 1985-86 to 55% in 1986-87. For heads and supervisors, already hardpressed to maintain services because of staff cuts and restrictions on replacements, the additional training load represented by this increase created further demands on their resources.

Longtime support staff members who retired or resigned included Ingeborg Schafer, Library Assistant 4, Catalogue Records; John Nanning, Library Assistant 3, Copy Services; Teresa Petrala, Library Assistant 2, Collections; and Wendy Murphy, Library Assistant 3, Prebindery.

The number of work study students funded through the Awards Office for Library work continued to decline drastically. While 55 positions were advertised by the Library, only 15 were filled. Work study students assisted in shelving materials, maintaining the bookstacks in an orderly condition, processing materials, data entry, and filing. The loss of these student hours has resulted in reshelving delays, disorderly shelves, and slower processing of materials.

## Appendix C

### LIBRARY OPERATING EXPENDITURES Fiscal Years, April/March

<u>Year</u>	<u>Salaries &amp; Wages</u>	<u>Collections</u>	<u>Binding</u>	<u>Other</u>	<u>Totals</u>
1984/85	9,825,272 (66.17)	3,649,325 (24.58)	178,021 (1.20)	1,195,044 (8.05)	14,847,662
1985/86	9,589,910 (63.85)	4,266,642 (28.41)	202,553 (1.35)	959,160 (6.39)	15,018,265
1986/87	9,584,602 (61.20)	4,853,225 (30.99)	198,148 (1.27)	1,025,395 (6.55)	15,661,370

- Notes: (1) There was a change in practice regarding collections expenditures because of which figures for 1984/85 are not comparable with those of other years. Funds for orders which have been placed, but not yet received, can now be carried forward to the following fiscal year. The introduction of this practice resulted in lower expenditures in 1984/85 and higher expenditures in 1985/86.
- (2) Expenditures from grant and trust funds are not included; in 1986/87 they amounted to \$233,805 for collections.
- (3) Cost recoveries of \$237,301 are not reflected in Appendix C.

1. Number of searches: a total of the figures in columns 2 to 6.
2. Student specials: limited searches provided to UBC students at a flat fee.
3. UBC searches: for UBC members, excluding student specials.
4. Non-UBC searches: full costs, including staff time, are charged for searches on behalf of persons not associated with the University. These searches tend to be complex and often involve the use of several data files.
5. Reference searches are usually brief inquiries for information not readily accessible in print.
6. ILL verification is a search for the purpose of determining the existence and location of documents and ordering them on-line as interlibrary loans.
  - \* The total for Science includes all ILL verification for the Library system except Woodward and the hospital libraries
  - \*\* The Woodward total includes ILL verification for Woodward and the 3 hospital libraries.
7. A single reference search may involve the use of more than one data base. Staff time for a reference search may vary depending on the number and combination of data bases used.
8. Selective Dissemination of Information reports: the number of monthly updates distributed to clients. Current awareness (SDI) profiles are included in columns 1 to 5 only when they are initially established or subsequently revised.
